

# CameraRC Deluxe Edition 2.3.0 - Release Notes

CameraRC Deluxe provides tethering support for the below listed Nikon cameras.

## **Nikon Cameras Supported**

- D40<sup>1,2</sup>
- D40X<sup>1,2</sup>
- D60<sup>1,2</sup>
- D80<sup>1,2</sup>
- D90<sup>1</sup>
- D200<sup>1,2</sup>
- D300
- D300S
- D3
- D3X
- D3S
- D4
- D4S
- D5
- D500
- D5000<sup>1</sup>
- D5100
- D5200
- D5300
- D5500
- D600
- D610
- D700
- D750
- D7000
- D7100
- D7200
- D7500
- D800
- D800E
- D810
- D810A
- Df

<sup>1</sup>These models require Windows Compatibility Mode be set to Windows Vista Service Pack 2.

<sup>2</sup>These models are not supported on Mac El Capitan (OSX 10.11) and newer OSX releases.

## **Enhancements**

- Added capability to shoot intervals while in live view.

## **Bugs Fixed**

- Corrected an issue of intermittent camera disconnects on mac with older model Nikons (e.g., D3, D300, D700, ...) when shooting continuous images at maximum shot counts. See

- our [Post on Mac Disconnects for more information](#).
- Fixed issue with Live View not starting if there was an error starting Live View after the issue preventing Live View is fixed - for example after setting the lens aperture to minimum. Previously required restarting the program.
- Program would hang in capture mode if using Bulb and shot count was not set to 1.
- Corrected invalid warning message on some cameras when lens is not attached.
- Fixed problem on Mac with D40, D40X, D60, D80, and D200 not working correctly with Raw (NEF) images.

## **Known Issues**

- Properties window does not display the Sensitivity (ISO) value when settings are not numeric values (i.e. Lo-1, Hi-1, etc.).
- On Mac computers the program may hang if Adobe Bridge is running at the same time as CameraRC Deluxe.
- On Mac computers older camera models (e.g., D3, D300, D700, ..) have exhibited issues with intermittent disconnects when shooting in continuous mode with maximum shot counts. See our [Post on Mac Disconnects for more information](#).
- On MacOS High Sierra (10.13) menus on the Thumbnails Window, Main Control Panel, and right click popup menus on all Windows do not work. All basic functionality seems to be operational.

## **End Of Life Notification**

- Windows Vista is no longer officially supported.
- Mac OS 10.8 (Mountain Lion) is no longer officially supported - Mavericks (10.9) support will be dropped on the release that officially supports High Sierra (10.13).

## **Program Limitations**

- Only one camera can be connected and in use by the program on a single computer.
- Hot switching between camera models (i.e., Changing cameras while the program is running) is not allowed.
- Program cannot be installed onto a network share - can only be installed on a local disk drive.
- Images captured that are not focused in contrast mode live view (i.e., focus indicator not green) will incorrectly display the last phase detect focus point instead of displaying no focus point. The focus points are also incorrectly shown in Nikon Software as they are incorrectly stored in the image by the camera. The degree of this error varies depending on camera model.
- If there are a large number of images (100's) on the memory card installed in the camera it can take a minute or longer for the program to initialize.

## **System Requirements**

- Windows 7 or later
- Mac OSX 10.9 - 10.12
- 2 Gbyte of RAM
- 50 Mbyte free disk space
- Recommended screen resolution 1024 X 768 - lower resolutions supported with scaling.
